Learn the signs of stroke

Did they suddenly lose balance or coordination?

Do they have sudden blurred or double vision, or loss of vision in one or both eyes?

Ask them to smile. Does one side of the face droop?

Ask them to raise both arms. Does one arm drift downward?

Ask them to repeat a simple sentence. Are the words slurred? Can they repeat the sentence correctly?

If they show any of these symptoms, time is important. Call 911
