

FANCG Immortalized primary FA human fibroblasts

PD352 (*FANCG*^{-/-})

Description

Organism: *Homo sapiens*, human

Tissue: Skin sample donated by FA patient to Oregon Health and Science University.

Synonyms: FANCG

References

Immortalization was achieved using this procedure:

Immortalization of Four New Fanconi Anemia Fibroblast Cell Lines by an Improved Procedure. P.M. Jakobs, et al., Somatic Cell and Molecular Genetics. 1996

[Access free PDF version](#)

Growth media

Alpha MEM (HyClone, SH30265.01), 15% fetal bovine serum (FBS, Hyclone Laboratories, SH30071.03), and 1% penicillin-streptomycin (Gibco #15140122).

Antibiotic Resistance

The PD352 line carries a puromycin resistance marker residual from complementation assays and not essential to the *FANCG*^{-/-} phenotype. If you would like to maintain the line in puromycin, the recommended dose is 1µg/mL.

Cell Line	Puromycin	G418 (neo)
PD352	+	

Datasheet version: 1/3/2022

FANCG Immortalized primary FA human fibroblasts

Quality Control Testing

- A terminal expansion sample was sent July 2021 to IDEXX BioAnalytics (Columbia, MO, USA) and authenticated using the Cell Check 16 Plus service as well as tested for *Mycoplasma* and interspecies contamination from mouse, rat, African green monkey and Chinese hamster.

Cell Line	Mycoplasma sp.	mouse	rat	Human	Chinese Hamster	African Green Monkey
PD352	-	-	-	+	-	-

- A Human 16 species-specific **STR marker profile** has been established for this cell line and used for comparative analysis with available published profiles to confirm its unique identity. The genetic profile can be used for future comparisons of this cell line.
